

ABSTRACT OF THE DISCLOSURE

A detachable neckroll that attaches to the headrest of an automobile seat and that allows hands free use of a cellular or mobile telephone while a person is driving. The neckroll is formed from a cushioned body attachable to the headrest of an automobile seat by a strap having hook and loop fastening material. The neckroll houses at least one speaker and supports a pivotally mounted boom microphone which may be positioned in front of an occupant of the automobile seat. A cord with a phone plug attaches the neckroll to a cellular phone. The cord may include an inline volume control for adjusting the volume of the speaker and/or microphone. The contoured neckroll allows the user to converse over the telephone while remaining alert and attentive to his or her driving.
